It is difficult to manually lubricate a bearing to the correct amount of grease using an ordinary grease gun, and with an electrically or pneumatically driven barrel pump it is almost impossible. As a result many bearings get too much grease which shortens life time and can lead to expensive breakdowns.

The Assalub grease meter works with most kinds of grease guns. Before you start lubricate you can reset the meter with the press of a button.

The meter displays the amount with large (9 mm) and easy to read numbers on a display with the unit (cm³, g, oz, or fl.oz.). Whatever measurement unit it's set for it can be calibrated to show a correct amount.

The grease meter has a resettable counter (for the total amount).

With the help of Assalub's Grease Meter it is now possible to lubricate just the right amount, using the bearing manufacturer's recommendations, to give the bearings a longer life while also saving up to 30% grease.

Technical data

Material, housing:	Aluminium, anodized
Seals:	NBR
Working pressure:	Max 70 MPa/10,000 psi
Flow:	Max 1,000 cm ³ /min
Measuring accuracy:	±3% up to 30 MPa (4 400 psi)
Height of digits:	9 mm
Number of digits:	4
Battery:	1 piece of AA (1,5 V)
Medium:	Grease up to NLGI 2
Weight:	0.3 kg

Ordering Details
