Contract Lubrication

Lubrication is the life blood of any equipment. To achieve maximum efficiency and availability of your plant equipment, it is essential to lubricate your assets correctly. This means using the appropriate lubricant with the precise amount, applied at the right intervals.

Statistically between 60% and 80% of equipment failures are directly related to poor lubrication. Typically these are as follows:

- Lack of lubrication management and poorly set up Preventative Maintenance Schedules;
- Poor lubrication process;
- Poor lubrication selection;
- Lack of equipment knowledge;
- Unmotivated personnel or lack thereof.

Lube Control can help increase productivity and reduce unexpected downtime, with qualified tradesmen and engineers who can provide:

- Initial or comprehensive lubrication surveys;
- Efficient lubrication routes;
- Recommendations of optimum lubricants;
- Rationalisation of lubrication inventory;
- Routine lubrication;
- Collection of oils and sampling;
- Oil and filter changes;
- Diagnosis, installation and repair of lubrication systems and lubrication related equipment;
- Cleaning of assets where applicable;
- Adequate labelling of lubricants and assets;
- Upgrades and ongoing maintain to lube stores and;
- Written reports.

Lube Control sets its benchmark to the world's highest lubrication standards, and can achieve an outstanding lubrication program at your plant, utilising our reliable and competent team.

Lube Control charges on an hourly or monthly basis. Alternatively, we can provide a fixed regular service cost for your budget.

Whether it's solely part of your lubrication program or you wish to utilise our service for complete lubrication management, Lube Control is the healthiest choice you can make for the productivity of your plant.
