Product Specification

Product	Automatic long-term grease and oil lubricator			
Power generation	Hydrogen gas producing drycell			
Working pressure	Max. 5 bar			
Adjustment	Stepless 1–12 months (for standard conditions)			
Dispensing rate	See table on page 11			
Operating temperature	–20 °C to +55 °C (–4 °F to +131 °F) ambient temperature (Note: grease consistency changes with temperature)			
Operation/Usage	Grease dispenser can be installed in any position, even under water. Attention: do not expose to direct heat.			
Certifications/ Approvals	   II 1G Ex ia IIC T6 Ga II 1D Ex ia IIIC T80 °C Da I M1 Ex ia I Ma			
Ingress protection	IP68 (dust- and waterproof)			
Usage period	Activation within 2 years of production date			
Stock temperature	Recommended at 20 °C ±5 °C (65 °F ±5 °F)			
	30 ml	60 ml	125 ml	250 ml
Weight full	~82 g	~115 g	~190 g	~335 g
Weight empty	~55 g	~60 g	~75 g	~111 g

simalube 30

simalube 60

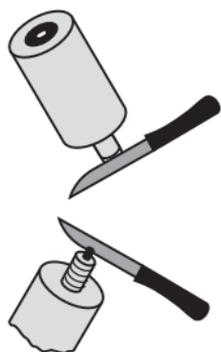

simalube 125

simalube 250

Assembly and Installation

- 1) Open the lubricator outlet by cutting off seal or removing plug.

Do not remove plug from oil filled units! Cut off the protruding nipple with a knife; a small black point becomes visible (opening now guaranteed).

- 2) To start the simalube lubricator, set the gas generator to the required dispensing time (stepless in months, 1–12) using a 3 mm allen key. The lubricator is activated once the dispensing time has been set. Take the required dispensing quantity from the tables on page 11.

- 3) Note the starting date on the label using a waterproof pen.

- 4) Clear grease lines and fill them with the appropriate grease. Screw simalube onto the greasing point. If necessary, use accessories shown on page 33–39. Apply safety rules.

- 5) Once the set dispensing time has expired, replace empty lubricator with the same type or refill. Before restarting, clear grease lines and fill them with the appropriate grease.

- 6) The gas generator is sufficient to empty the unit **once, irrespective of the dispensing time set.**

Security note: If the lubricator is started without opening the outlet or in case of blocked grease lines within the installation, the pressure in the lubricator can build up approx. 5 bar. At an overpressure of approx. 6 bar the lubricator breaks at the defined breaking point between housing and bottom. The pressure behind the piston releases and oil or grease can come out at the breaking point.

The correct functioning of the lubricator can only be assured if recommended lubricants (see table on page 14) and original simalube accessories are used, and if the installation, operating and maintenance instructions are closely followed. The manufacturer cannot accept any responsibility for damages as a result of ignoring the instructions mentioned above. **Important:** Before putting simalube into operation, fill extensions and the lubrication lines with the appropriate simalube greases (cartouches SL01 ...SL26) using a grease gun. Use only original accessories.

Temperature / Output rate

The output rate can be adjusted as required, depending on the ambient temperature (see table).

Example: You want to set the dispensing time for a 125 ml simalube for 180 days.
 Ambient temperature: 20 °C Ambient temperature: 55 °C
 Setting: 6 Setting: 7

simalube 30

Dispensing time (days)	30	90	180	270	360
ml/day	1.00	0.33	0.17	0.11	0.08
Temperature	Setting	Setting	Setting	Setting	Setting
-20 °C	+	2	3.5	5.5	7.5
4 °C	+	2.5	5	7.5	10.5
20 °C	1	3	6	9	12
40 °C	1	3	6.5	9.5	-
55 °C	1	3.5	7	10.5	-

+ Use larger dispenser with longer dispensing time

- Smallest possible output rate reached

simalube 60

Dispensing time (days)	30	90	180	270	360
ml/day	2.00	0.67	0.33	0.22	0.17
Temperature	Setting	Setting	Setting	Setting	Setting
-20 °C	+	2	4	6.5	8
4 °C	+	2.5	5.5	9	10.5
20 °C	1	3	6	9	12
40 °C	1	3	6.5	9.5	-
55 °C	1	3.5	7	10.5	-

+ Use larger dispenser with longer dispensing time

- Use smaller dispenser with shorter dispensing time

simalube 125

Dispensing time (days)	30	90	180	270	360
ml/day	4.17	1.39	0.69	0.46	0.35
Temperature	Setting	Setting	Setting	Setting	Setting

4 °C	+	2.5	5.5	8	10.5
20 °C	1	3	6	9	12
40 °C	1	3	6.5	9.5	-
55 °C	1	3.5	7	10	-

+ Use larger dispenser with longer dispensing time

- Use smaller dispenser with shorter dispensing time

simalube 250

Dispensing time (days)	30	90	180	270	360
ml/day	8.33	2.78	1.39	0.93	0.69
Temperature	Setting	Setting	Setting	Setting	Setting
-20 °C	++	2	4.5	7.5	9.5
4 °C	++	2.5	5.5	8	10.5
20 °C	1	3	6	9	12
40 °C	1	3	6	9	-
55 °C	1	3.5	6.5	9.5	-

++ Use 2-fold adapter

- Use smaller dispenser with shorter dispensing time

The values relate to laboratory conditions, SL01 with no counterpressure. At low temperatures in particular, the values may vary between one grease type and another. The dispensers must be replaced once the dispensing time set has expired, even if they are not completely empty.

The grease quantity dispensed per day is influenced by:

- counterpressure/resistance from the grease lines
- ambient temperature
- viscosity of the grease

Start-up time:

The lubricator requires a certain start-up time until the lubricant is first dispensed. The start-up time varies in line with the volume dispensed, dispenser size and operating temperature selected. At 20 °C ambient temperature and a dispensing time setting of 12 months, the dispenser outputs the lubricant within one week. The start-up time doubles at low temperatures (–20 °C) or with small dispensers (30 ml).

You can reduce the start-up time in such a case by setting a dispensing time on the lubricator of one month for one to two days and then changing to the desired dispensing time.

Calculation Pro:

An online calculation program is available at www.simatec.com (simalube/calculation pro). This tool calculates the right setting for the simalube lubricator if you enter the precise operating parameters.

Notes:

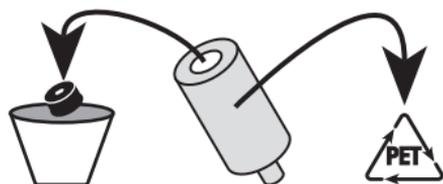

In order for the unit to function reliably, it is important to have clear, filled grease lines. It must be ensured that the grease lines are not blocked. Consequently, the grease lines should always be cleared with a grease gun before starting.

The simalube can be re-adjusted or switched off during operation. The values on the gas generator relate to laboratory conditions (see page 10). Depending on the temperature and setting, it may take several hours (or several days in the case of long-term settings) until the lubricant is first dispensed. The user must check the operation of the simalube regularly.

Grease lines should be no longer than 0.5 m. Recommended bore diameter: 6–8 mm. Resistance in grease lines has to be minimized, narrow passages and right angles should be avoided. Use a mounting support in the event of strong vibrations or high accelerations (for accessories, see pages 33–39). Use the pressure booster (art. 230.1000) simalube IMPULSE with long lubrication lines or high back pressure.

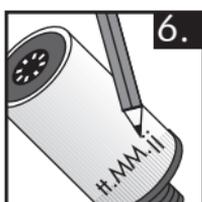

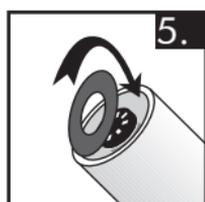

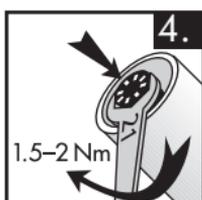

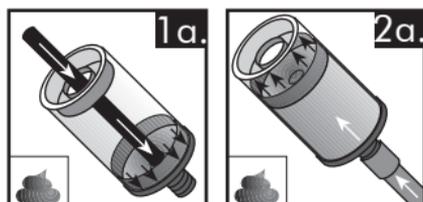

The simalube may only be used to supply **a single** grease point. No branches may be made. Once the lubricator is installed and activated, it must not be removed and mounted onto another lubrication point.

Recycling Instructions

- 1) Unscrew gas generator and dispose of complete unit for battery recycling (see above). **Note:** Do not detach lubricator near an open flame.
- 2) Dispose of empty housing for plastic recycling. If the lubricator still contains lubricant after use, please dispose of it in accordance with local regulations.

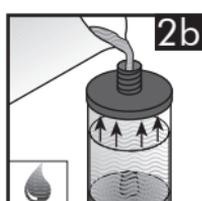

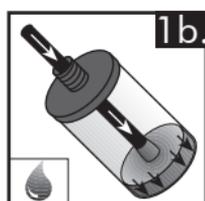

Filling and Refilling (for small quantities)

Filling with grease

- 1a. Push piston all the way forward by blowing gently with compressed air or with the aid of a plastic rod (7 mm diameter), towards the bottom or opening.
- 2a. Screw on refill nipple (art. 290.3012) and connect grease gun, or screw connector nipple (art. 290.3013 or 290.3014) onto grease gun. Keep the dispenser pressed to the adapter during the filling process so that you do not have to screw on the refill nipple again. Press grease into the dispenser. Avoid air bubbles when filling the unit. Continue the filling process until the piston has been pushed all the way back. Do not overfill! **Caution: Lever presses can create pressure of up to 80 bar, which is enough to destroy the dispenser.**
- 3a. Use closing nipple (green) if the dispenser is to be stored.

4. Position gas generator (make sure the O-ring is positioned correctly) and attach firmly with a 1.5–2.0 Nm torque key.
5. Clip in cover disk.
6. Note grease type and filling date on the label.

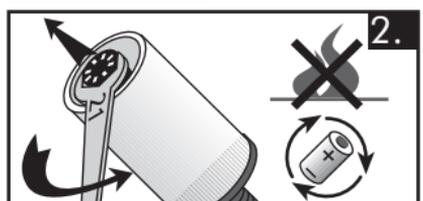

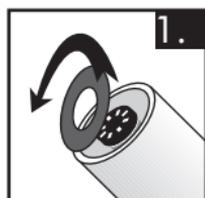

Filling with oil

- 1b. Push the piston all the way back (towards the gas generator).
- 2b. Pour in oil through the opening at the bottom.
- 3b. Position non-return valve (yellow, art. 290.5060).
- 4.–6. Continue as above.

Refilling with grease or oil

1. Remove cover disk.
2. Unscrew gas generator (SW 21) and recycle with other batteries. Never remove near an open flame! Then continue as above for filling with grease or oil.

Note

To ensure that the simalube lubricator operates reliably, only greases that have been tested and approved for use with the simalube should be used. In particular, it is important to ensure the good stability of the grease against bleeding of the base oil and a low consistency class (max. NLGI 2). No guarantee claims will be accepted when dispensers are filled by the user or not explicitly approved lubricants are used. If in doubt, please contact our Technical Department or your local distributor.

Lubricants

The standard lubricant range suitable for simalube includes modern high quality lubricants tested and modified for the special requirements of grease and oil dispensers. Datasheets are available online for all lubricants (www.simatec.com). Please refer to these datasheets for the instructions/safety regulations of the grease/oil manufacturers.

No.	Application	Temperature range (in the area of lubrication)
SL01	Multipurpose grease	-30/+120 °C
SL02	Multipurpose grease with MoS ₂	-25/+130 °C
SL04	High temperature grease	-20/+160 °C
SL06	Fluid grease (EP)	-20/+120 °C
SL09	Biodegradable grease	-20/+80/100 °C
SL10	Food industry grease (NSF H1)	-30/+140 °C
SL14	Chain oil (EP)	-10/+90 °C
SL15	High temperature chain oil (EP)	-30/+250 °C
SL16	Machine oil	-20/+100 °C
SL18	Food industry oil (NSF H1)	-15/+150 °C
SL19	Biodegradable chain oil	-15/+100 °C
SL24	Grease for a wide temperature range (EP)	-30/+140 °C
SL25	High temperature grease	-20/+160 °C
SL26	High performance grease (EP)	-20/+150 °C

simalube can also be delivered filled with other lubricants or as an empty unit. Ask for advice. The operation of simalube with oils of different viscosities is also possible.

simalube has been safety inspected and approved by the following institutions:

Because my bearings are worth it!

«Once installed, simalube lubricators lubricate evenly, accurately and reliably. This is not at all possible with manual lubrication.»

Long lubrication lines?

High back pressure?

1603/610.9280

Here is your solution:

The new simalube IMPULSE

- Produces pressure up to **10 bar**
- For long lubrication lines
- Flashing LED status indicator

Ask your partner or visit our website www.simatec.com for more information.
